BUILD ROOM OS · FIELD GUIDE

Say These Words.

BUILD ROOM OS

AI Momentum Labs

Every Build Room session starts with one sentence. Say it, and the session reads your Business File, asks only what the file can't answer, builds the asset, and writes its section back.

1. **Say the phrase** — Any phrase on this sheet, in Claude Code or Codex.
2. **It reads your file** — Your Business File answers everything it already can.
3. **Answer the gaps** — One question at a time. Only what the file doesn't know.
4. **Save the asset** — A finished offer, page, map, SOP, or script.
5. **Keep the file** — It hands back your updated file and names the next session.

START HERE

run once, then whenever you're lost

"I'm new to the Build Room, set me up"
Build Room OS · navigator
Creates your Business File, fills §1 Snapshot in five minutes, and names the one session to run next.
Needs nothing · Writes §1

"Where do I start?"
Build Room OS · navigator
Shows what's complete and what's provisional, and gives you exactly one next step with the words to say.
Needs file · Writes nothing

"Build my compass"
Compass · anytime
Who you are at a deep level, in a page and a half that ends in your Compass Statement. Every later session sounds like you.
Needs nothing · Writes §17

FOUNDATION

in this order, one a week

"Help me build my ideal client avatar"
Ideal Client Avatar · Week 1
The one person you're writing to: pains, dream state, objections, and a language bank built only from real client words.
Needs §1 · Writes §2

"Help me build my signature offer"
Signature Offer · Week 2
Promise, structure, phases, deliverables, value stack, guarantee, and a 60-second pitch.
Needs §2 · Writes §3

"Help me position my business"
Positioning & Messaging · Week 3
Category, differentiator, positioning statement, tagline, villain, for-you and not-for-you lists: your Messaging Bible.
Needs §2 §3 · Writes §4

"Write my offer page"
Offer Page Copy · Week 4
A complete, publication-ready page, headline to CTA, plus the path to publish it on your own domain.
Needs §2 §3 §4 · Writes §5

FUNNEL & AUTOMATION

in this order

"Help me map my funnel"
Funnel Map · Week 1
A traffic strategy proposed from your file, the map, one conversion event, emails written one at a time, then built in your CRM and launch-tested.
Needs §1 · Writes §6

"Build my follow-up system"
Decision Machine · Week 2
A campaign on every yes/no in your funnel, one belief per message, tag architecture, and a build map your CRM can run.
Needs §3 §6 · Writes §16

"Help me build my opt-in page"
Lead Capture · Week 3
Lead magnet, landing page or a built web application that qualifies leads, thank-you page, delivery automation, CRM wiring.
Needs §6 · Writes §7

"Where is my funnel leaking?"
Funnel Scorecard · Week 4
Every stage measured, the top three leaks with fixes you approve one by one, and an optional weekly routine that re-runs it.
Needs §6 + a week of traffic · Writes §6 §13

LEADS, SALES & ADS

"Help me get more leads"
Lead Gen Machine · four modules
Warm network, outreach machine, referral system, content pipeline. One module per session, picked from your file.
Needs §1 · Writes §14

"Help me with my sales call"
Sales Conversations
A stage-by-stage consultative script, your objection set, and a role-play partner.
Needs §3 · Writes §15

"Make me ads"
Ad Studio · monthly
Three different concepts, finished statics in three sizes around your real face and proof, and a kit ready to upload.
Needs §2 §3 · Writes §18

§ numbers are sections of your Business File. **Needs** = sections that must exist first. **Writes** = what the session updates.

Operations, hardening, electives.

OPERATIONS

in this order

"Help me document my processes"
SOP Creator · Week 1
Processes triaged, 2–4 SOPs someone else could run, a checklist each, and a go / no-go on automating.
Needs §1 · Writes §9

"Help me hire for this role"
Hiring Ad + Interview Kit · Week 2
Scorecard, filter ad, screening call, paid work sample, structured interviews, offer.
Needs §9 · Writes §10

"Help me train my new hire"
Team Training Doc Builder · Week 3
Training modules with checkouts, a 30-day calendar, a sign-off log, a living FAQ.
Needs §9 §10 · Writes §11

"What numbers should I be watching every week?"
Weekly Ops Dashboard · Week 4
Five to nine numbers, a one-page dashboard, the weekly meeting, an optional Monday routine.
Needs §9 §11 · Writes §12

HARDENING

when the navigator flags it

"Find the words my clients actually use"
Audience Insight
Real customer language with sources, into your sourced bank. Run before a page ships on guessed quotes.
Needs §1 · Writes §2

"Make my offer a no-brainer"
Offer Deep Dive
Twelve questions, seven answered from your file: the one belief, value stack, real urgency.
Needs §3 · Writes §3

ANYTIME

"Write me the email"
Copy Engine · any piece
Copy in your voice from your file: Kern for short pieces, Halbert for long-form. Or "write me the sales letter."
Needs §2–§5 · Writes nothing

"Let's brainstorm"
Brainstorm Session + Board
Frame, diverge, cluster, vote, decide. Then say **"Capture what we decided"** for owned, dated records.
Needs nothing · Writes §13

"Convene the board"
C-Suite Boardroom
Four executives who genuinely disagree about your real business, and a chairperson who forces the call.
Needs file · Writes §13

"Run discovery on this business"
Discovery Engine · the Genie, rebuilt
Research first, confirm, ask only the gaps, then the ten Genie outputs. Your business, a client, or a prospect.
Needs §1 or a subject · Writes §1–§4 §13

"Make me a video"
Video Director · ad, content, sales, testimonial
Script, a ten-minute phone shoot, the edit, captions, review. Around your real face and footage.
Needs §1 §2 · Writes §19

ELECTIVES

when you want them

"Set up my second brain"
Obsidian + Claude Code
A vault on your machine with Claude inside it; your Business File moves into its root.
Writes §1 tools

"Build me a source watcher"
Source Watcher
A watcher on any source (podcasts, YouTube, newsletters), filtered by your goals, into your vault.
Writes §13

"Make me an agent"
Agent Forge
One agent definition from the thirteen elements, installable as a skill or a build brief.
Best with §9 · Writes §13

IF A SESSION SAYS SOMETHING IS MISSING

Run the missing session first. Almost always right. The navigator names it.

Or take the provisional path. A five-minute interview stands in. The output is marked *provisional* and the Viewer keeps flagging it until the real session runs.

THE ONE HABIT

Never re-explain your business. Every session reads your Business File first and hands it back updated. Replace your saved copy every time.

If a session asks something the file already answers, say: **"Read my Business File first."**

New this month: more ways to say it.

DISCOVERY ENGINE

three ways in

“Research this client before I talk to them”
Discovery Engine · a client

A separate client Business File and a Discovery Call Script. A client's details never enter your file.
Needs a name or site · **Writes the client's file**

“Prep me for this call”
Discovery Engine · a prospect

A Prospect Brief: what research found, the assumptions, friction points and first-call questions.
Needs a name or site · **Writes §14 line**

“Run the genie”
Discovery Engine · your business

Research first, you confirm, then the ten Genie outputs: pitches, FABB, persona, her deepest fears, twenty outcomes.
Needs §1 · **Writes §1–§4 §13**

FUNNEL & LEADS

new steps

“Build my funnel”
Funnel Map · now with traffic

It proposes your traffic: one primary, one secondary, one test channel, with cost and time to first lead. You confirm or swap.
Needs §1 · **Writes §6**

“Build the workflows in GHL”
Decision Machine · CRM build

Tags, custom fields and approved emails pushed with your own key, a browser build sheet, then a launch test.
Needs §6 §16 · **Writes §16 §6**

“Help me build my opt-in. I want an application.”
Lead Capture · application

Three application ideas from your file, built and reviewed in one session, answers landing in your CRM.
Needs §6 · **Writes §7**

“How did my ads do?”
Funnel Scorecard · ads

Your ad results read beside every funnel stage: cost per lead and booked call, against last week.
Needs §6 §18 · **Writes §6 §13**

VIDEO DIRECTOR

pick the playbook

“Make me a video ad”
Ad playbook · from the Ad Studio

Three hook openings on one body, so the test shows which hook wins. Every size, captions, a kit.
Needs §18 concept · **Writes §19**

“Make me a content video”
Content playbook

Shorts and long-form, a series with a keyword call to action, repurposed into every size.
Needs §1 §2 · **Writes §19 §14**

“Make me a sales video”
Sales playbook

An offer explainer, a sales video or a personalised prospect video. Guarantees word for word.
Needs §3 · **Writes §19 §5**

“Help me get a client testimonial video”
Proof playbook

Who to ask and when, the ask, the consent form, the interview and the clips. Never a fake.
Needs a happy client · **Writes §19 §18**

“Caption this video”
Captions

SubMagic captions in your template, or built-in captions as the fallback. Spelling checked against your script.
Needs a video · **Writes nothing**

“Set up the video engine”
Volume mode

The automated video pipeline, with the monthly cost stated before you sign up for anything.
Needs nothing · **Writes §19 §13**

ADS, PROOF & YOUR FILE

“Give me ad concepts”
Ad Studio · or “write me ad hooks”

Three genuinely different concepts, three hooks each, scored before a cent is spent.
Needs §2 §3 · **Writes §18**

“Capture this win”
Proof Engine · or “ask for a testimonial”

A client result turned into proof you’re allowed to use: three questions, permission recorded, one placement at a time.
Needs §1 · **Writes §18 §19**

“Never use this line again: …”
Retired lines · any session

The line goes into §1 Retired lines. No session uses it again, in any ad, page, email or video.
Needs file · **Writes §1**

First time with a tool (Higgsfield, Kie.ai, SubMagic, HeyGen)? The session walks you through sign-up. Keys live in your **.env** file, never in chat. Nothing is spent without a quote you approve.

LinkedIn Engine: clients, no ads.

BUILD IT

once, about two hours

“Build my LinkedIn engine”
LinkedIn Engine · the whole build

Your pillars, the profile rewritten, three posts in your words, a carousel, a four-week calendar, your watch list and message templates.
Needs §1 §2
Writes §14 §13 §8

“Fix my LinkedIn profile”
Profile

Two headlines, a rendered banner, About, Featured, the button choice, Follow or Connect. You paste it in.
Needs §1 §2 **Writes §14**

“Write my LinkedIn posts”
Posts · voice first

Three questions about real moments, then posts built from your answers, one at a time. Nothing invented.
Needs §2 **Writes §14**

“Make me a LinkedIn carousel”
Document carousel

Your method as 5 to 10 slides in your brand, exported as the PDF you upload.
Needs a method
Writes nothing

THE RULES

why your account stays safe

“You press every button”
No automation, ever

The engine drafts, queues and counts. You post, comment, connect and message yourself. No scraping, pods, “comment GUIDE” bait or bought tools.
Always **Pacing guard warns**

“No signal, no DM”
Warm only

Messages go to people who engaged, viewed, changed role or reached out first. Strangers get a comment first. Two follow-ups, then stop.
Always **Pipeline refuses cold**

RUN IT

20 minutes a day, an hour a week

“Who should I message on LinkedIn today?”
Daily · the 20 minutes

Comments to write, warm signals to answer, follow-ups due, each with a draft for you to edit and send.
Needs your pipeline
Writes nothing

“I posted it: [link]”
Log a post

The post goes on the calendar with its link, ready for the scorecard.
Needs a post **Writes your log**

“Plan my LinkedIn week”
Weekly loop

Twenty minutes of stories, three drafts, last week’s scorecard, next week’s calendar.
Needs the build
Writes §14 §13

“How is my LinkedIn doing?”
Scorecard

Export last week’s analytics from LinkedIn (the session shows you where), drop the file in: this week against last, and the one fix.
Needs the export
Writes §14 §13

“Show me how the LinkedIn engine works”
Demo

One headline, one post, one message and one scorecard, labelled as a demo. Nothing written.
Needs nothing
Writes nothing

TWO CLOCKS

judge each at the right time

“Weeks 1 to 4”
Warm conversations

People who already know you, plus warm signals: conversations and calls come first.
Daily routine **Calls booked**

“Months 3 to 6”
Content inbound

Consistent posts on two or three topics build the inbound. No one can promise it faster.
Three posts a week
Inbound DMs

Event Launcher: events that sell.

PLAN IT

weeks before

“Plan my launch”

Event Launcher · the whole plan

The math back from your goal, the format, the one belief, the offer at the close, dates and a timeline. Reads your past launches in Obsidian first.

Needs §1 §2 §3 · **Writes §20 §13**

“Help me run a challenge”

Or “a 3-day bootcamp”, “a workshop”, “a webinar”

The format that fits your list and price, with the day-by-day shape.

Needs §3 · **Writes §20**

“Write my launch emails”

Belief, invitation, reminders

One at a time, in your voice: three belief emails, the invitations, confirmation and every reminder.

Needs the plan · **Writes nothing**

“Launch partners”

Partner launches

Who to ask, in what order, the deal in writing, their kit and their disclosure.

Needs a tested offer · **Writes §20**

THE GATE

before anyone is invited

“Is my launch ready?”

Launch gate

Checkout tested on a phone, follow-up switched on, reminders timed right, proof consented, deadlines real. GO or HOLD.

Needs the build · **Writes §20**

RUN IT

the live days

“Run sheet for day 2”

Run-of-show

Clock times, who does what, every link the moderator drops, and the checks.

Needs the plan · **Writes nothing**

“It’s day 1 tonight”

Live mode

Log today’s numbers, write tomorrow’s night-before email, fix one thing.

Needs the tracker · **Writes the tracker**

“Plan the close”

The offer at the end

Three doors at most, a real deadline, a payment plan that doesn’t punish, the backup payment link.

Needs §3 · **Writes §20**

LEARN FROM IT

after the cart closes

“How did my launch do?”

Debrief

Every step against the plan, the three biggest leaks with one fix each, what to protect. Saved to your Obsidian vault.

Needs the tracker · **Writes §20 + vault**

“Show me how the event launcher works”

Demo

The math, one belief, one email, one run-sheet hour and the gate, labelled as a demo.

Needs nothing · **Writes nothing**

Webinar Builder: the hour itself.

BUILD IT

one block at a time

“Build my webinar”

Webinar Builder · the whole talk

A live 60-minute talk in your own words: the agreement, the promise with the offer said up front, your story, three teaching blocks that answer their own questions, the offer from your close, the Q&A, and a finish on time.

Needs §1 §2 §3

Writes §20 Webinar line

“Write my webinar title and registration page”

Title and page

Three titles to pick from, three bullets, and a page that says how long it runs, that there will be an offer, and that nobody will call.

Needs the talk

Writes the page words

“Make my webinar slides”

Slides and notes

A deck you can read from across the room, with your prompts in the notes. Opens in PowerPoint, Keynote and Google Slides.

Needs the talk

Writes slides.pptx

THE CHECK

before it goes live

“Is my webinar ready?”

Or say it inside “is my launch ready”

Every price and date against your close, proof consented, nothing retired, no fake urgency, the recording announced, type big enough. GO or HOLD.

Needs the talk

Writes check.md

GET BETTER

after every run

“Rehearse my webinar”

Rehearsal scorecard

Record one run-through on Zoom and bring the transcript: when the offer started, what ran long, answers you put off, and the three fixes.

Needs a recording

Writes a scorecard

“How did my webinar go?”

Run review

Who stayed and where they left, the questions nobody answered, the numbers, and the next version drafted for you to approve.

Needs Zoom’s files

Writes §20 + scorecard

“Why didn’t my webinar sell?”

Diagnosis

In order: did people come, did they stay to the offer, did they buy? The one leak to fix first.

Needs your numbers

Writes nothing

“Make my webinar evergreen”

Only after a live run sells

A recorded version, labelled as recorded, with a real replay expiry and an honest questions segment.

Needs a live run that sold

Writes §20

THE RULES

why people trust it

“Live first, never pretend”

No fake live, counts or chat

A recording is always called a recording. No invented attendance, typed-in poll results, seeded questions or timers that reset.

Always

The check refuses them

Your webinar lives in **launches/<name>/webinar/** beside the launch plan. Bring a moderator: a spouse, an assistant or a friend runs the chat.

Website Design Studio: a look that’s yours.

SHOW IT

you don’t have to describe it

“Set up my taste vault”

Website Design Studio · step 1

Drop 5 to 15 screenshots of designs you like into your Obsidian vault, one from your own field. Say a word about each. You hear back, in plain words, what you keep choosing.

Needs §1 §2

Writes your taste vault

“Make my website look like me”

The whole session

Three very different versions of your real landing page, side by side. Say what you like and don’t. Pick one, ask for three more like one, or mix two. Three rounds at most.

Needs §1 §2 · best with page copy

Writes §22

“Design my landing page”

Or “my opt-in page”, “my sales page”, “my webinar slides”

A landing page unless you say otherwise. Your approved words, word for word: the design never changes what you say.

Needs your copy

Writes the page

IMAGES

your photos first

“Use my own photos”

Always first

Real photos of you and your work get looked at. Stock gets skipped.

Needs your photos

Writes images.json

“Make the images I’m missing”

With Kie.ai

Scenes, places, textures and backgrounds, never a real person. You see the list and the cost first; nothing is made until you say yes.

Needs a Kie.ai key in .env

Writes the media ledger

TUNE IT

sliders, not prompts

“Tweak my page”

The tweak bar

About twelve sliders and toggles on your page: colours, fonts, text size, corners, spacing, buttons, the top of the page, light or dark. Shuffle, Reset, and Save this look.

Needs a chosen page

Writes tweaks.json

LOCK IT

so everything matches

“Lock my look”

The Design System

Your colours, fonts and sizes, with a do and don’t list in your words and a page to hand a designer or VA. Every page, deck and ad after this reads it.

Needs a saved look

Writes §22 + Design/System

“Is my page ready to go live?”

The check

Text 18px or bigger, contrast your readers can see, fits a phone, no reference images, no numbers that aren’t in your file, and the eight generic AI tells named. GO or FIX.

Needs the page

Writes check.md

“Change my brand colours”

Re-lock

Tune again and lock a new version. The old one is kept.

Needs §22 **Writes §22**

THE RULES

why it stays yours

“References are for mood only”

Take qualities, never assets

Nothing from your taste vault ever goes on your page. Each version mixes at least three references.

Always

The check refuses them

Search & Answer Engine: found without ads.

SET IT UP

the first two sessions

“Get found on Google”
Search & Answer Engine · the whole build

The order of work for your business, your profile scored and fixed, a question map in your customers’ words, your first answer page through the gate.
Needs §1 §2 · Writes §21

“Fix my Google Business Profile”
Profile

Eligibility first. Then what moves rank (category, real name, hours, reviews) before what moves the buyer (photos, posts, services).
Needs §1 · Writes §21

“What questions do my customers ask Google?”
Question map

15 to 25 questions rated five ways; your service page first, then the question most likely to bring a call.
Needs §2 · Writes nothing

EVERY MONTH

about two hours

“Am I showing up in ChatGPT?”
Check

Ten customer questions run logged out on Google’s AI, ChatGPT and Perplexity: who got named, who didn’t, the trend.
Needs §21 · Writes §21

“List my business everywhere”
Listings

Bing Places, Apple Business, Yelp, Facebook, then BBB, Nextdoor, the chamber. Same name, address and phone everywhere.
Needs the profile · Writes §21

THE RULES

why nothing gets you suspended

“Ask everyone, the same way”
Never gated, never paid

No gift or discount for a review, no sorting the happy from the unhappy, no staff or family, no bursts: Google pauses a profile that spikes.
Always · Google’s policy and the FTC rule

“Your real name, nothing added”
Profile rules

Added words in the name are a leading cause of suspension. No in-person contact, no profile: listings and pages instead.
Always · The tracker flags it

“Nothing retired”
Old advice to ignore

Q&A seeding, FAQ schema, llms.txt, star markup and city pages with the name swapped: gone or harmful in 2026.
Always · The skill refuses them

EVERY WEEK

about three hours

“Search week”
Weekly

The profile’s 30 minutes, the next question from the map; monthly, one mention.
Needs §21 · Writes the tracker

“Answer this question on my website”
Answer page

One page: the answer in the first 100 words, sources, your own view, the typical result beside any claim. Checked before it goes live.
Needs §21 · Writes §21

“Publish this page”
Publish & index · or “is my page live yet?”

Puts the page on WordPress, Webflow, Shopify or Wix for you (keys stay in your .env file), or hands you a ten-minute paste list for the rest. Then tells Bing, checks the page is live, and shows you Google’s one click.
Needs a page that passed · Writes §21

“Get more Google reviews”
Reviews

The ask in your voice, sent the same way to everyone, never gated, never paid for; every review answered within a week.
Needs the profile · Writes the tracker

TRY IT

nothing written

“Show me how the search engine works”
Demo

One profile check, three rated questions, one answer, one review ask. Labelled as a demo.
Needs nothing · Writes nothing

TWO CLOCKS

judge each at the right time

“Weeks 1 to 8”
The profile and reviews

Score, reviews, calls and direction requests. Judge the profile here.
Weekly 30 minutes · Calls

“Months 3 to 6”
Pages and AI answers

Clicks at three months; a customer question naming you at three to six.
One page a week · Bookings

BUILD ROOM OS · THE FINISHING CREW

Pick one, finish it, build the next.

BUILD ROOM OS

AI Momentum Labs

1. **Triage** — Pick the one project to finish.
2. **Finish It** — Audit, cut scope, answer the questions.
3. **Approve** — Say yes to the goal read-back.
4. **The crew** — Builds, tests and reviews; you watch.
5. **Ship** — One next action, then the next project.

1 · TRIAGE

choose the one to finish

"Triage my projects"

Triage · or "what should I finish?"

Lists your unfinished projects, scores each on closeness, value, pull and the cost of leaving it, and asks for one yes. Never two.

Needs a list or a folder · **Writes PORTFOLIO.md, §13**

"Help me choose"

Triage · too many projects

Same session. You get the top pick with two sentences of reasoning and the runner-up in one. Pick something else if you like; the point is a single yes.

Needs nothing · **Writes PORTFOLIO.md**

2 · FINISH IT

take an unfinished project over the line

"Finish it"

Finish It · or "take this over the line"

Snapshot first, the undo button. An auditor reads everything and writes what works, what is broken and what is missing. You answer its questions one at a time; scope only goes down.

Needs the project folder · **Writes STATE.md, GOAL.md, LATER.md**

"What is left to do?"

Finish It · the audit

Stops after the audit if you want: what works, what is broken, the smallest shippable version, and the questions only you can answer.

Needs the project folder · **Writes STATE.md**

"Yes, build it"

Finish It · after the goal read-back

The plan for the gap only, then the crew: builder, tester, reviewers, a five-person test panel. Ends with the ship checklist and the one next action.

Needs your yes on GOAL.md · **Writes PLAN.md, PROGRESS.md, SHIP.md**

CONTINUITY SYSTEM

from community member Jenn

"Set up the continuity system for this project"

Continuity · any long project

Three small files in the project's own folder keep the goal, the exact next step and every decision, so nothing is lost to a new thread.

Needs a project folder · **Reads your file, never writes it**

"Pick up where we left off"

Continuity · or "hand off cleanly"

Reloads the project from its files, checks nothing is stale, and says the next action. Works when you switch between Claude and Codex.

Needs continuity/ · **Writes STATE.md**

3 · BUILD IT

a new idea to finished software

"Build me an app"

Build It · or "build it"

Brainstorms first, one question at a time with a proposed answer, until the idea is sharp. Then asks "Ready for me to write the Pursue Goal?"

Needs your idea · **Writes nothing yet**

"Pursue goal"

Build It · the goal

Writes one complete goal: outcome, requirements, constraints and a numbered Definition of Done a tester can check true or false. Read back to you before any build.

Needs the brainstorm or a brief · **Writes GOAL.md**

"Build it"

Build It · the crew

Plan, then milestone by milestone with a tester after each, four reviewers in parallel, the persona panel, docs, and a release judge who must say APPROVED.

Needs your yes on GOAL.md · **Writes PLAN.md, PROGRESS.md, docs/**

ANY TIME

pick up where it stopped

"Finish it or Build it"

Again, in the same folder

Out of room or a new day: open the same folder and say the same words. It reads PROGRESS.md and carries on from the last finished step.

Needs PROGRESS.md · **Writes PROGRESS.md**

THE RULES

why it finishes

"One at a time"

Never two

One project marked finishing now. One builder working at once. New ideas go to LATER.md, not into this run.

Always · **Scope only goes down**

"Done means shipped"

Not approved

Approved but not shipped is still unfinished. Done is the ship item: a live link, a release, a first real user.

Always · **SHIP.md**

Say the words inside the project's own folder. Its working files stay there; your Build Plan (§13) shows what is finishing, parked and shipped.
