BUILD ROOM OS
AI MOMENTUM LABS

What's new in Build Room OS

Changes since the November 11 release, plus how to get them.

- **A new tool:** the Website Design Studio gives your pages a look that's yours
- **Three versions side by side**, then sliders to fine-tune
- **Your look, locked**, so every page, deck and ad matches
- **On the Build Room connector?** You already have it

SINCE LAST TIME

What's new, in plain words

1. The Website Design Studio NEW

Most pages AI makes in 2026 look the same: a cream background, a big headline with one word in italics, little labels over every heading. This tool gives yours **a look that's your own**, and you **show** your taste instead of describing it.

2. Show it, then react

Drop screenshots of designs you like into your **Obsidian vault**, and it tells you in plain words what you keep choosing. Then you see **three very different versions of your real landing page**, side by side, and say what you like and don't.

3. Sliders, not prompts

On the one you pick, a panel of **about twelve sliders and toggles**: colours, fonts, text size, corners, spacing, buttons, light or dark. Where your own photos run out, it can make scenes and backgrounds with **Kie.ai**, never a real person, and only after you see the cost.

4. Locked, so everything matches

Your colours, fonts and sizes are saved as your **Design System**, with a do and don't list in your words. Your pages, slides, ads and videos all read it. A check makes sure text is big and clear, and fits a phone.

GOOD TO KNOW

Your **Business File** gained a new section, **§22 Design System**. You don't have to do anything; the tool fills it in. **Say These Words** now has nine pages; this tool is page 7. Thirty-eight tools now.

TRY THE NEW THING FIRST

Try the Website Design Studio

On the connector, or already updated (page 4)? Then:

1. **See a short demo first.** Type: **Show me how the design studio works**. Nothing is changed; it's a tour.

2. **Collect what you like.** Type: **Set up my taste vault**. Then screenshot 5 to 15 pages or details you like, including one business in your own field, and drop them in.

3. **Start for real.** Type: **Make my website look like me**. Bring your page words if you have them.

4. **React out loud.** "Love the photo, hate the green" is perfect. Plain words are all it needs.

5. **Play with the sliders**, save the looks you like, and pick one. It locks your look.

6. **Before it goes live:** **Is my page ready to go live?**

YOURS, BY DESIGN

Your screenshots are for inspiration only: nothing from them ever goes on your page. No made-up numbers, no fake "trusted by" logos, and no AI picture of you or a client.

ALREADY INSTALLED?

Get this version

On the Build Room connector? Nothing to do: the Website Design Studio is already there. Start a new chat and say **Make my website look like me**.

Using the Build Room OS folder? Update it this way. Your Business File and everything you've made stay exactly as they are:

1. **Download** `BuildRoom_OS_2026-11-13.zip` from the Members' area.
2. **Unzip it there. Mac:** double-click the file. **Windows:** right-click it and choose **Extract All**, then **Extract**. Don't unzip it over your old folder.
3. **Run the update** and point it at your Build Room OS folder (drag the folder into the window to paste its path):
   Mac: `bash ~/Downloads/BuildRoom_OS/update.sh "/path/to/your/BuildRoom_OS"`
   Windows: `powershell -ExecutionPolicy Bypass -File "$HOME\Downloads\BuildRoom_OS\update.ps1" "C:\path\to\your\BuildRoom_OS"`
4. **Read what it says.** It replaces only the tools, keeps a backup, and confirms your Business File is unchanged.

STUCK?
Bring it to the next Build Room session. An update never touches your Business File.
